

# The Bibione Project

## —Archaeological Research on a Roman Villa—

The Bibione Project originated from the collaboration of the Institute of Classical Archaeology at the University of Regensburg, the Department of Cultural Heritage and Department of Geosciences at the University of Padua, as well as the Italian Ministry of Cultural Heritage.

The research project explores the architectural structures, the functions and the many roles of the Roman Villa of Mutteron dei Frati by collecting important data to reconstruct the ancient surrounding landscape in particular.

Thanks to the financial support of the DFG, the project is going to start in March 2023. Therefore, we are looking for motivated students to participate in the project and become part of the excavation team. The research team will be involved in numerous activities:

- excavation and archeological documentation
- archaeological survey
- study of archaeological materials
- geophysical prospecting
- coring and geomorphological investigation
- paleobotanic analysis

The use of new methods in the field of cultural heritage and the clarification of communication strategies are an integral part of the project.

### Villa romana di Mutteron dei Frati, Bibione (Italy) International Archeological Excavation 2023

Prof. Dirk Steuernagel, Prof. Maria Stella Busana  
Dott. Alice Vacilotto, Dott. Lorenzo Cigaina
